EDUCATION

M.Tech. - Computer Science & Engineering

IIIT Hyderabad

📅 2019 - 2021 (expected)

CGPA: 9.22

B.Tech. - Computer Science & Engineering

School Of Engineering, CUSAT, Kochi

📅 2012 - 2016

CGPA: 8.88

Intermediate

St. John's School, D.L.W., Varanasi

📅 2012

Percentage: 94.10%

Matriculation

St. John's School, D.L.W., Varanasi

📅 2010

Percentage: 92.10%

EXPERIENCE

Software Consultant

Unisys India

📅 July, 2016 - July, 2018

📍 Bengaluru, India

- Developed a Windows application for the client to enhance the record retrieval process using .Net framework.
- Automated the storage of backup, recovery and log files using PowerShell.
- Provided Application Support for the resolution of application and system issues.

SKILLS

- **Programming Languages and Tools**
C, C++, Python, MySQL
- **Platforms**
Linux, Windows

COURSEWORK

- Advanced Problem Solving
- Real Time Systems
- Information Retrieval & Extraction
- Data Analytics
- Machine Learning
- Parallel Computing
- Operating Systems

PROJECTS

WikiSearch

- Created a complete search engine by creating an Inverted Index on the Wikipedia Corpus (of 2020 with size 42 GB), that gives you top search results related to the given query within 5 seconds.
- Supports Field queries specific to category/title/infobox.
- **Technologies used:** Python

CRAFTML - MultiLabel Classification

- A clustering based Ensemble method to classify data into multiple labels for EurLex4k dataset.
- Parallelization of the forests resulted in the faster execution by 3.5 times.
- **Technologies used:** C++.

SimpleRA

- A minimalist, integer-only, Relational Database Management System.
- RDBMS operations such as select, project, cross, rename were implemented for the data stored as pages from a csv file.
- Attribute sorting, hashing, aggregate operations have also been incorporated.
- **Technologies used:** C++

GDriveFS: Mounting Google Drive as a Filesystem using FUSE

- Developed A user-space Python application that links against fusepy and maps the appropriate kernel calls to HTTP requests to Google Drive API and vice-versa.
- **Technologies used:** Python

P2P File Sharing System

- Made use of Socket Programming and Multi-threading to build a file sharing system.
- User can download files from its peers after checking its status using a tracker which keeps track of shareable files and online status of peers.
- **Technologies used:** C++.

TomShell: POSIX compatible Mini shell

- Implemented a subset of features of Linux Shell including basic shell operations such as directory operations, pipe and redirection.
- Logging of the past commands executed by the user was also maintained which would be accessible using history command.
- **Technologies used:** C++.
